### Editorial

We are pleased to launch the “Journal of Environment & Biotechnology Research”, a new international scientific journal that intends to publish high quality scientific report results. This new journal covers all fields of environment and biotechnology. The “Journal of Environment & Biotechnology Research” is a completely open access journal, free for all to read and to submit their papers to provide maximum exposure for the science published in its pages.

The journal is delighted to present this very first edition, which presents papers on a wide variety of topics. The first paper studies the effect of different doses of ovaprim in stimulating ovulation and spawning response of African catfish, *Clarias gariepinus*. The next paper evaluates the potential of green seaweed to remove praseodymium from contaminated solutions. The third paper reports the expression profile of TLR18 from pangasius catfish induced with poly I:C. The fourth paper explores the potential of *Saccharomyces cerevisiae* immobilized on delignified cellulosic substrate for the removal of cadmium from acidic effluents. The fifth paper examines the potential of *Gracilaria corticata* towards the removal of crystal violet from aqueous solution. The sixth paper batch cultivated *Hypocrea tawa* using a concentric draft-tube airlift bioreactor to evaluate its potential to reduce Cr(VI) to Cr(III). The seventh paper synthesizes polypyrrole nanoparticles to decolorize simulated textile effluent.

We are delighted that “Journal of Environment & Biotechnology Research” is accessible through the Vinanie online system, which means free permanent electronic access immediately upon publication. We will

strive with the help of our editorial board members to ensure that “Journal of Environment & Biotechnology Research” becomes a leading publication outlet in the field. We would like to thank Vinanie publishers, members of the editorial board and current as well as future authors and referees in supporting us to achieve this goal.

We look forward to receiving many more interesting and novel papers in the future.
